

WE are against Japan's plan to slaughter whales for 'scientific' reasons!

We, the undersigned, are deeply opposed to Japan's plan to slaughter Humpback and other whales in the name of 'scientific research', especially when it defies international agreement and violates protected sanctuaries and species. To kill whales for 'scientific' reasons is nothing but commercial whaling in disguise! We urge Japan to stop this abuse of a loophole in the International Convention on Whaling. By continuing to kill whales in the name of science, Japan is not meeting its international treaty obligations in good faith.
